ARBA MINCH UNIVERSITY

DEPARTMENT OF STATISTICS

Probability and Statistics

Work Sheet (For Assignment)

1. **Collect the data on the following variables for all second year software engineering students.**
   i. Section (as:- A or B)
   ii. Age (in years)
   iii. Cumulative grade point average (CGPA)
   iv. Eye color (as:- white, brown, black, other)
   v. Weight (in Kg)
   vi. Expected grade score on probability and statistics course(as:- A+, A, A-, B+,B, B-, C+, C, C-, D, F)
2. For each variable in question number one (1) specify the scales of measurement.
3. Considering age variable in question number one (1) construct a grouped frequency distribution table which will contains:- class-limit, frequency, class-boundary, class-mark and less-than cumulative frequency.(assume both section as one group!)
4. Select the appropriate descriptive statistics and give the summary & description of the data value (variables) in question number one (1).
5. Considering CGPA variable in question number one (1) calculate the mean, variance, and coefficient of variation (CV) value for section-A and section-B students separately and also calculate combined mean and combined variance for two sections in common then make some comparison based on the results.

NB:- The assignment should be done in group having member of maximum 10 individuals and submission date will be March **10/2025!!**

- **Presentation will be on: march 10/2025 for Section-B & march 11/2025 for Sec-A!**
